DEPARTMENT OF ANTI-FUCKERY · CASE FILE 001 · THE 35-PAGE EDITION

MADJACKET

OPEN FILE

A comic, an anime, and a community that helps decide what it means.

CASE FILE

CASE NO.
0001

JURISDICTION
Cortex City

TOLD BY BOXLORD · QOROMANCY LABS

NOTE
OPEN FILE is a working title for the comic. This is the 35-page edition; a longer one goes into every detail.

Why I am starting with *who I am*.

In a few minutes I am going to ask you to trust a mechanic built on how a mind reads a moment, a way of reading I will walk through once we get there. That structure did not come out of a brainstorm. It came out of my own life, and I think the pitch only makes sense once you know that.

So before Cortex City, before Martin, before the mint, here is the short version of where the idea actually came from, and why I am the one building it.

Built to *notice*.

I am Boxlord, also Shallah Jones. I am from New York City, I run Qoromancy Labs, and I recently moved to North Carolina because of the dev scene here. I have been an illustrator and animator for as long as I can remember, and what I do best is build systems that other people and other tools can work inside of.

Growing up, the character I understood best was the boy Haley Joel Osment played in The Sixth Sense and later in A.I. Both are children who notice more than the adults around them want to admit, and who carry that knowledge quietly. I was not haunted like that first boy, but I always felt a little odd, like I was watching the room half a second before it happened.

The kid who notices more than the adults want to admit.

NOTE

The Sixth Sense (1999) and A.I. Artificial Intelligence (2001).

A colorful childhood, *a darker backdrop*.

My childhood was colorful and mostly happy, with a lot of art, music, and love. But behind that bright foreground there was a heavier backdrop, and I noticed it early: mental illness in my family, loss, and inconsistency, which taught me that people can be wonderful and unreliable at the same time.

As a small kid I drew tombstones with my brother's name on them, and a comic on a sticky note about a spider who died and went to the afterlife. Music gave the feeling a name. Tears for Fears, especially Everybody Wants to Rule the World, moved me to tears — that song is written in the Mixolydian mode, a major scale with a flattened seventh, and later I learned its name. To my ear it's a happy sound with the floor slightly missing. That is still the feeling I chase when I write.

Bright in the foreground. Something heavier in the backdrop.

Third grade in *Queens*, and September 11.

By third grade I was living in Queens, in a classroom full of kids from immigrant families, and I was already known as the kid who could draw. My mom worked in Manhattan, so I knew what the Twin Towers were and what they meant, which most of my classmates did not. I had a confidence about being an artist that a lot of the other kids wanted for themselves, and plenty of them wanted to be artists too, but they mostly doodled.

On September 11th I saw the silhouette of a tower fall from my classroom, and at home I watched the live broadcast of people jumping from the towers as they fell.

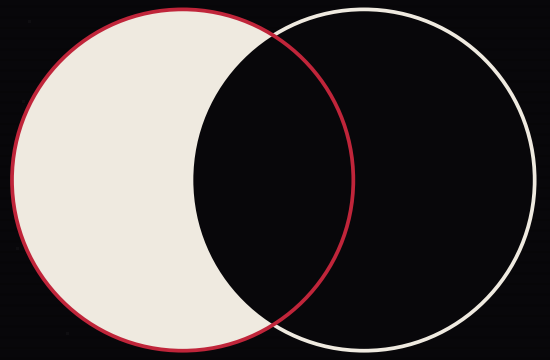

A week earlier I had been in the shopping mall in the basement of the towers with my mom, buying a Timberland bookbag at Daffy's. What I remember most is that none of it fazed me. I felt numb, and realizing that about yourself at that age, that you can feel nothing in front of that much death and tragedy, is a difficult thing to sit with. My childhood felt interrupted after that, and dark thoughts arrived early.

NOTE
Told plainly, once, and with care.

The drawing, *and the handshake*.

That same day I drew my mom, and it came out looking exactly like her.

Around then I also made a construction paper cutout of a handshake, one hand black and one hand white, by tracing my own hand and then making the two hands shake. I was nine years old. My teachers were astounded that a nine-year-old would think in symbols like that, and some of them used the word prodigy. My classmates did not take it as well.

A construction paper handshake.

A poem, *and a rumor*.

I also wrote a poem called I Can, which I still wish I had a copy of. It was about believing in myself and being able to do whatever I set my mind to, and the words I can repeated through every stanza like a heartbeat. My teachers were blown away. Another group wrote a silly Cat in the Hat style poem with no substance and tried to compete, and even spoke down to me about it, and I paid them no mind.

I can.
I can.
I can.
I can.
I can.
I can.
I can.

The jealousy did not stay quiet. A rumor spread among some of the third graders that I was a conjurer and had drawn my mom back to life. I did not fully understand it, since I was shaping an identity and they were reacting to it, but that feeling of being alienated for being good at something has followed me all the way to today.

Getting in, and *when my mind broke*.

School kept moving. I kept getting good grades, because that was one thing I could control, and I auditioned for the High School of Art and Design and got in. A lot of my family doubted that art could be a career, partly because they could not picture it and partly out of jealousy, and I ignored them and kept succeeding.

In my first year of college I got sick. It was psychosis, and I had to pause my studies. I recovered, and it took time, care, and a lot of learning to trust my own mind again. I went back and graduated from the Fashion Institute of Technology with a BFA in Animation, summa cum laude.

NOTE

Shared by choice, in my own words.

What recovery taught me, *and why this*.

The most useful thing recovery taught me is that the same event can be read in more than one way, and that the reading matters as much as the event. When I was sick, the events of my life had not changed, but my mind's interpretation of them had become distorted, and healing was partly the slow work of asking what actually happened and what I decided it meant. That pair of questions is the engine of everything I write.

I have spent years watching institutions and communities decide what people's lives mean without asking them, and years learning to interpret my own life for myself. MADJACKET is built around one idea: a story should be able to ask you what you think it means, and listen to the answer.

The same event can be read more than one way.

FIT, and *the rooms* I learned in.

At FIT I met someone who went on to co-found The Mallard Order, the only person there I really clicked with, and she knew my best friend before I ever met them, so it felt meant to be. A lot of the room felt pretentious to me, and she did not.

I joined Mallard for illustration, graphic design, comic art, and 3D art. After that I became head illustrator at BitBird AI, on Cardano analytics branding, and then joined Pudgy Penguins for social media campaign art, animation assets, and prop design, plus some packaging and some exhibit design for the Walmart and Target expansion. I moved from New York to Miami to work with the art team in person. Then I left, because I wanted to build something of my own.

MALLARD ORDER
Illustration, comic art

BITBIRD AI
Head illustrator

PUDGY PENGUINS
Social, animation, prop design

QOROMANCY LABS
My own

That's the person. Here's *what it built*.

Recovering from psychosis taught me that the same event can be read more than one way, and that the reading matters as much as the event. Everything from here on, the city, the mechanic, the ledger, the anime, is that idea, turned into a product.

Cortex City is what happens when I take the question that got me through it, what actually happened versus what I decided it meant, and hand it to an entire city. Then to its readers. Then to you.

The *world*, Martin, and everyone's answer.

Cortex City is a surveilled city where a signal hums beneath everything and reads every citizen. The infected carry a Siamese Wound, a psychic scar that splits what they can perceive: the Hollowed can only see each other clearly, while everyone else reads as a gray, faceless ghost. Two people bonded closely enough can trigger metapsychosis, a shared psychic thread the regime treats as a threat, and not every metapsychotic pair ends up Hollowed, which is exactly what makes the ones who don't so dangerous to track. PsiCare, its clinical voice, promises to manage every mind, and the Oracle Chip restores sight, but it grafts onto the wound itself, so the cure and the surveillance run through the same line.

The Madjacket Unit is the city's policing and crime-fighting division. Martin Mevz is one of its officers, and he passes every scan on a fake chip.

In the first file he takes an off-books mission with his captain. By the end of the first volume he has been erased from every record the city keeps, and being deleted is what wakes him.

Every institution has an answer to a mind that changes: medicate it, police it, engineer it, or preserve it. The comic asks readers for the fifth answer.

INFLUENCES

- Mr. Robot (2015)
- Blade Runner (1982)
- Ghost in the Shell (1995)
- The Matrix (1999)
- Fight Club (1999)
- Cyberpunk 2077 (2020)
- Akira (1988)
- Serial Experiments Lain (1998)
- They Live (1988)
- Neon Genesis Evangelion (1995)
- Paprika (2006)
- Watchmen (2009)

How recovery shaped it, *and who you meet*.

When I was sick, the systems around me could only see a case, while the people who helped me saw a person who was changing, and I wrote that difference into the city. The story does not say psychosis is a superpower. It asks what people owe someone whose mind is changing.

MARTIN MEVZ

Officer

Passes every scan on a fake chip, and hides a scar under his cuff.

ROWAN THATCH

Captain

Warm, immaculate, and persuasive, with a preacher's smile that has an edge.

REN ALOMAR

Signal desk

Rigid and watchful. She says less than she sees.

QUBE

Companion

A cyber-corgi who speaks through his tactical vest, once in a while, in emojis on its LED panel.

NOTE

More of the cast is being kept back for later files.

Why it will feel *familiar*.

The story keeps landing on ideas crypto already cares about, and that was not an accident.

THE IDEA	IN THE STORY	IN THE EXPERIENCE
Your own key	The city tries to hold your mind with a chip.	Your wallet holds your key and your readings.
A record you can trust	The Department edits the record.	A public ledger of readings, open for anyone to check.
Two ways to count	The Signal treats every mind the same way.	A holder gives a Verified Ruling. Anyone else can give an Entry, worth a fifteenth as much.
Nothing is thrown away	Two answers to one problem.	The reading that does not win becomes its own file.

Fairness, open books, and *community canon*.

Cortex City answers who decides what something means with a single authority. The experience answers with a crowd.

FAIR AND OPEN

Holding a MADJACKET NFT gets you a Verified Ruling, full weight, and it decides the weather. Anyone else can still take part: that reading is an Entry, and it takes fifteen Entries to equal one Verified Ruling. Both are shown side by side, and the tallies are published so anyone can check the math.

OWNED BY THE ROOM

Scribes, meaning readers who help write the wording of the choices, and a small review council are planned. Community stories live in a clearly labeled layer, and contributions are credited in the printed volumes, so the main canon stays intact.

NOTE

Scribes and the council are planned and are not built yet.

Try it from the *character's* mind.

Something happens to a character that they did not choose. You are not asked how you would feel. You are asked how you think they should feel about it, the way a Mass Effect conversation wheel asks what your character says next, except this wheel sits inside their head, not their mouth. The event is fixed. Their reading of it is your choice.

A friend cancels the night before their birthday

Betrayal: they do not care as much as I do.

Miscalculation: they double-booked and feel terrible.

Inevitability: the friendship was already drifting.

Their boss calls the layoffs a chance to grow as a family

Betrayal: they are lying, and they know it.

Miscalculation: they are out of their depth.

Inevitability: this is what companies do.

They send a long, honest message and get left on read

Betrayal: they saw it and chose to ignore me.

Miscalculation: they meant to answer and forgot.

Inevitability: I always knew how this would go.

Three families, *every moment* writes its own answers.

The three families never change, so you learn them once. Each moment writes its own three answers in the character's voice, so the buttons describe the exact scene and let you choose the reading you think fits their mind, not your own.

BETRAYAL
Someone chose this, against you.

MISCALCULATION
Someone got it wrong, with no malice.

INEVITABILITY
It was always going to happen.

ISSUE 1: THE ELEVATOR

What does Martin expect to find?

Betrayal He is lying to me.

Miscalculation He is wrong, and does not know it.

Inevitability It is already decided.

AN ILLUSTRATION: A LOST ITEM

A stranger returns something Martin lost.

Betrayal This is bait.

Miscalculation They are being kind.

Inevitability He was always going to meet them.

AN ILLUSTRATION: A BLACKOUT

Every light on the block goes out for a second.

Betrayal Someone is sending a message.

Miscalculation A fault in the grid.

Inevitability Something is coming.

NOTE

The second and third examples illustrate the format and are not story events. Later seasons let community Scribes write the answers.

What you see, and *what happens*.

You tap the answer you think fits the character's mind in that moment, not your own feelings about it. Your choice is logged, everyone's split is shown, and the crowd's combined reading shapes how the character is written going forward.

FILE 001 · PAGE 8

FILE 001 · CLASSIFICATION: OPEN

What does he expect to find?

- He's lying to me.
- He's wrong, and he doesn't know it.
- It's already decided.

Take your time. The window is open for forty-eight hours.

YOUR READING IS LOGGED

Betrayal 61%

BETRAYAL 61%

MISCALCULATION 24%

INEVITABILITY 15%

PUBLIC STANDING

MARTIN THE OFFICIAL STORY

THE NEXT FILE OPENS IN *Pressure*

WINDOW CLOSES IN 46:12:08

NOTE

The example uses the elevator that ends Issue 1. The numbers are illustrative.

Your copy *changes*, and the weather.

YOUR COPY CHANGES

BETRAYAL

He smiled like a man collecting on a debt.

Warmer and redder, with a sharp caption.

MISCALCULATION

He smiled like a man who had rehearsed being right.

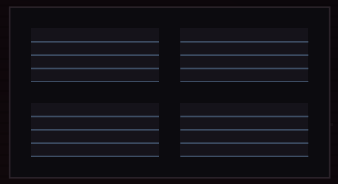

Cooler and cleaner, with a caption that reasons.

INEVITABILITY

The doors were closing. I had stopped steering.

Quiet and nearly still, like a prayer.

THE NEXT FILE OPENS IN THE WEATHER

STAGNATION

A calmer city, thicker surveillance, quiet dread.

STATIC

The neutral default, and what a tie gives.

PRESSURE

More patrols, faster pacing, louder propaganda.

THE CROWD LEANS TOWARD HARMONY — BALANCED — THE CROWD LEANS TOWARD CHAOS

NOTE

Example captions. Per issue, three captions, one color grade, and one panel are varied. Both openings are drawn ahead of time. The story information never changes. Weather is the most visible result of a tally; other parts of the city respond to it too, in ways not detailed here yet.

Thought habits, *not switches*.

A single tap does not flip a switch. One reading colors that file's captions and grade, but it does not, by itself, change what a character does or how the world responds. That would make the story feel random rather than earned.

What actually moves things is a pattern. After several files, the room's accumulated readings of a character build into what I call a Perspective Profile: a running read of how that character has been interpreted so far, tilted toward suspicion, toward good faith, or toward resignation.

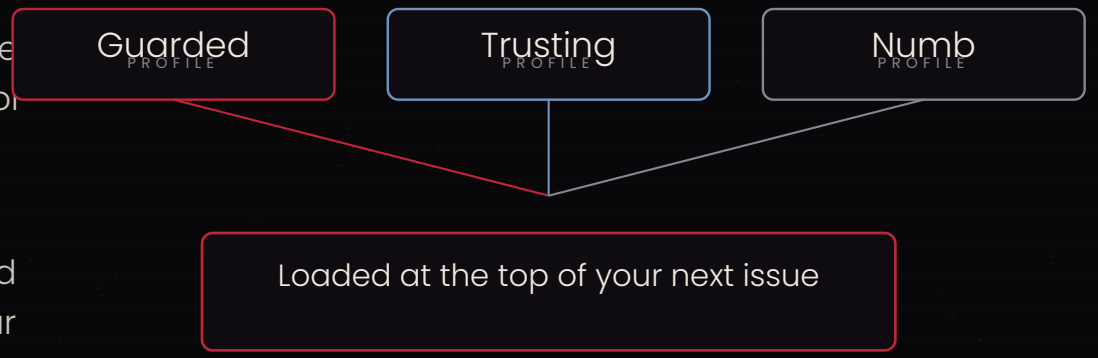

The profile is what pays off, not any single tap. You will not see a shift in the very next page. You will see it a file or two later, once the pattern is actually established, the same way a real habit of mind takes repetition to set in.

The *orchestration*.

This is not a story that writes itself as you go. Every consequence a profile can trigger is written in advance, the same way the three lens answers are written in advance for every Beat.

Before a file ships, I write the realistic responses, reactions, and results for the handful of Perspective Profiles that could plausibly exist by that point, and the one that matches your accumulated readings is loaded at the top of your next issue.

It is closer to a switchboard than to an improvising author. I am choosing which prepared path plays for you, not inventing one on the fly.

NOTE

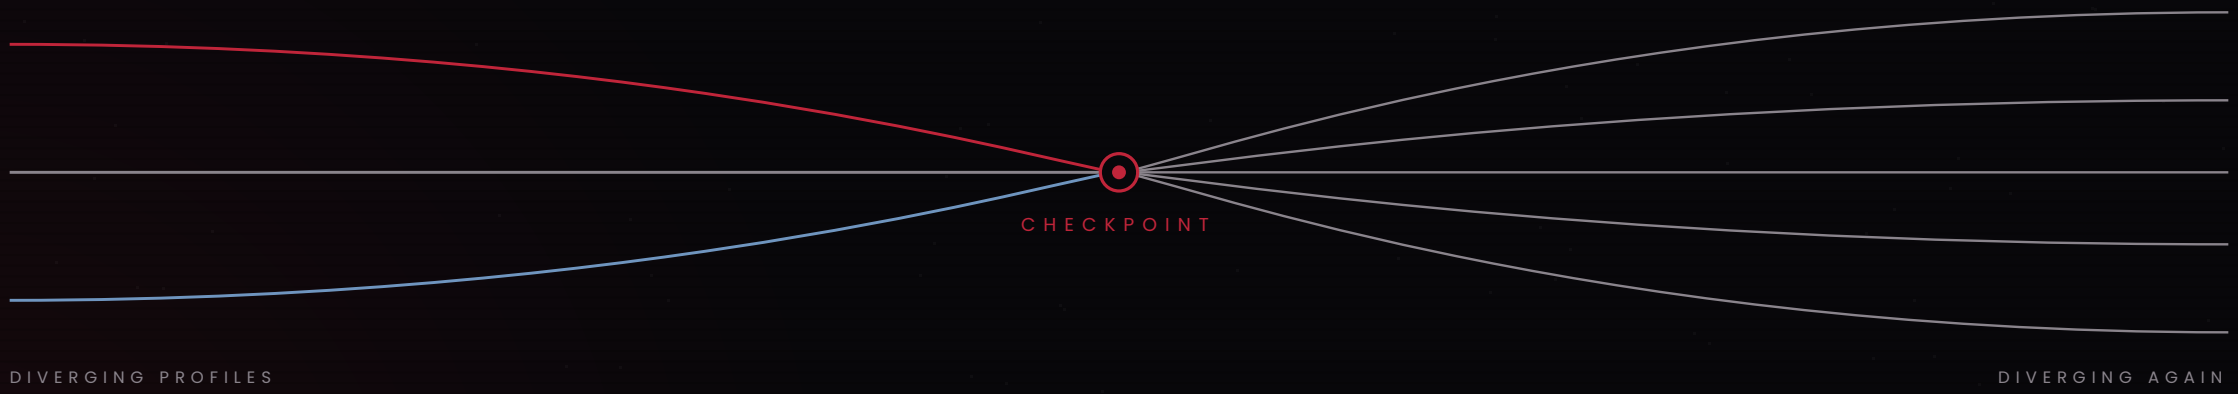

This is a writing structure, not a live-generating one. Every branch below is written before the file ships.

Checkpoints, where paths *converge*.

If every reader's profile forked the story forever, the number of versions would pass what one person could ever write or draw. So the branches are finite, and on a schedule, they meet back up.

At certain moments, a checkpoint, the story tallies where every profile currently stands and folds them back toward a smaller, shared set of scenes, before letting the profiles drift apart again on the far side.

A handful of authored branches between checkpoints, not an infinite tree. That is the whole trick.

NOTE

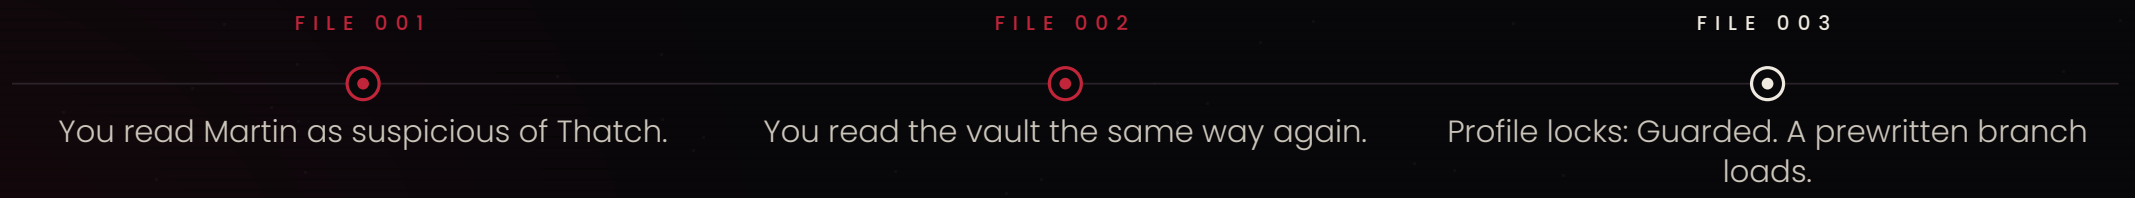

Checkpoints are what keep this affordable for one person to write and draw.

A worked example: *Martin*, across three files.

Here is what that looks like end to end. Say you read File 001's elevator scene as Betrayal, and File 002's vault scene the same way, both times seeing Thatch as someone working an angle on Martin.

By File 003, your accumulated readings have leaned hard enough toward suspicion that your Perspective Profile for Thatch locks in as Guarded. A branch I wrote specifically for a Guarded read of Thatch loads at the top of your File 003, changing a scene, a line of dialogue, or which detail the Department chooses to highlight.

Read him as Miscalculation twice instead, and a different, equally prewritten branch loads for you there instead. Nothing is generated in the moment. The pattern just decides which finished page you see.

NOTE

An illustration of the mechanic, not a spoiler of an actual branch.

A personalized *series*, for everyone.

Put together, this means the comic you are holding is already a little different from the one anyone else is holding, and it grows more different the longer you read, as your Perspective Profiles for each character diverge from the room's average.

The plan is for this to eventually reach the anime too. ARRIVAL could stage each viewer's own accumulated profile as its own cut of a scene, the same finite branch-and-converge structure as the comic, just rendered instead of drawn.

That is heavier compute than a single shared cut, which is exactly why it comes after the comic version is proven, and why anime compute is already the largest recurring line in what this project's funding covers. Realistically, at any branch point you are choosing between a small, fixed set of prewritten options, and checkpoints fold every viewer back toward shared tentpole moments so the whole thing stays finishable.

What this *is not*.

I want to be precise about what I am not promising, because it would be easy to oversell this. It is not a freeform, generative AI story that writes anything on demand for whoever is reading. Nothing is invented live.

It is not a guarantee that one tap changes anything by itself. It takes a real pattern, held across more than one file, before a Perspective Profile locks in and a different branch loads.

And it is not unlimited branching. It is a bounded, pre-authored set of paths that periodically converge at checkpoints, on a schedule I control. That boundedness is not a limitation I am apologizing for. It is what makes this something one person, with a set of tools, can actually finish.

How the weather is decided, *two tiers*.

Betrayal readings count toward Chaos, and Miscalculation readings count toward Harmony. Inevitability readings join whichever side is ahead. If Chaos leads by more than ten points, the next file opens in Pressure. If Harmony leads by more than ten, it opens in Stagnation. Anything closer opens in Static.

A tap from a holder is a Verified Ruling and counts in full. A tap from anyone else is an Entry, worth a fifteenth of a Verified Ruling, so it takes fifteen Entries to move the tally as much as one holder does.

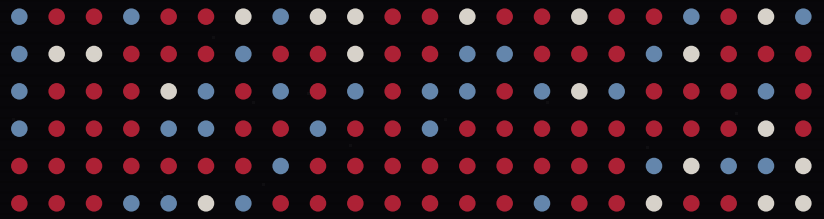

For example, say 100 holders rule 45 Betrayal, 35 Miscalculation, and 20 Inevitability. That is already a 65-to-35 lead for Chaos once Inevitability joins the front-runner. Entries from everyone else add on top of that, just at a fifteenth of the weight, so a large enough crowd can still shift where it lands.

THE NEXT FILE OPENS IN

Pressure

THE SIGNAL, ILLUSTRATED

NOTE

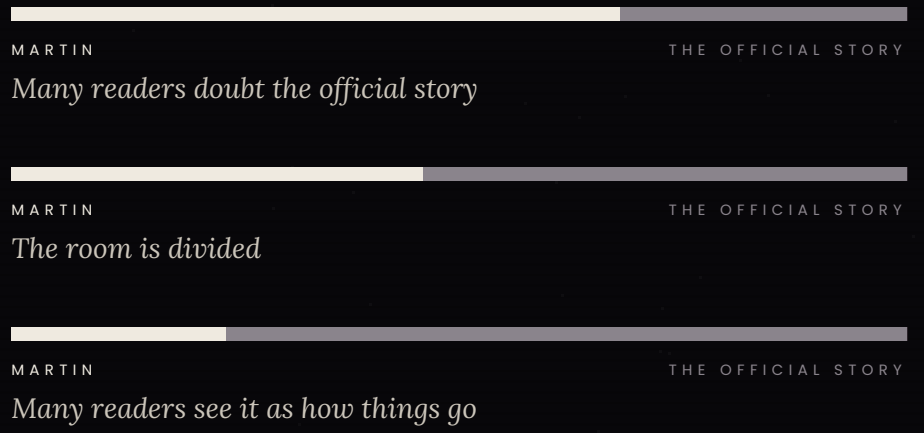

The ten-point margin is a starting value. A Verified Ruling requires holding a MADJACKET NFT.

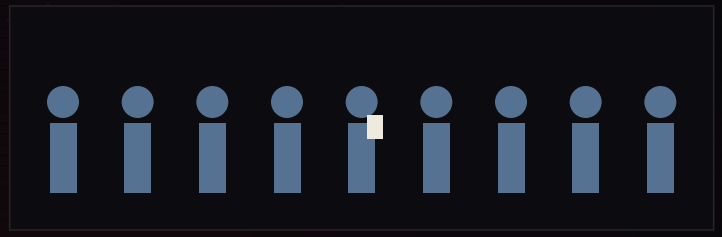

Public Standing, *in the crowd.*

Public Standing is a thin bar showing how much the city believes Martin compared with the official story about him. When many readers see an official story as a lie, it tilts toward Martin. When many see events as simply how things go, it tilts toward the official story. Honest-mistake readings leave it where it is.

You see it on the result card and, most clearly, in the crowd panels below, which are the same scene drawn three ways depending on where the bar sits.

PUBLIC STANDING

DOUBT

Thin applause. A reporter stops writing. Someone records.

SPLIT

Some cheer, some stare, a few step aside.

CERTAIN

The crowd cheers and points at Martin.

NOTE

Standing never changes what happens to Martin, only how the city around him looks. The crowds are illustrations.

What you cannot vote on, *and how it grows*.

FIXED

The spine of the story, the major turning points, who lives and who dies, and the ending. These are written and are the same for every reader.

YOURS

What each moment meant, how it felt, how the next file opens, and which of two side stories is told first. Meaning has always belonged to the reader.

THE MECHANIC GROWS WITH THE STORY

SEASON ZERO

The loop: a lens, the weather, a Verdict Night, crowds.

SEASON ONE

Standing becomes a bar, and reader stories join the back of each file.

SEASON TWO

Scribes write the choices, and readers can align with a reading.

SEASON THREE

Withheld.

SEASON FOUR

Withheld.

NOTE

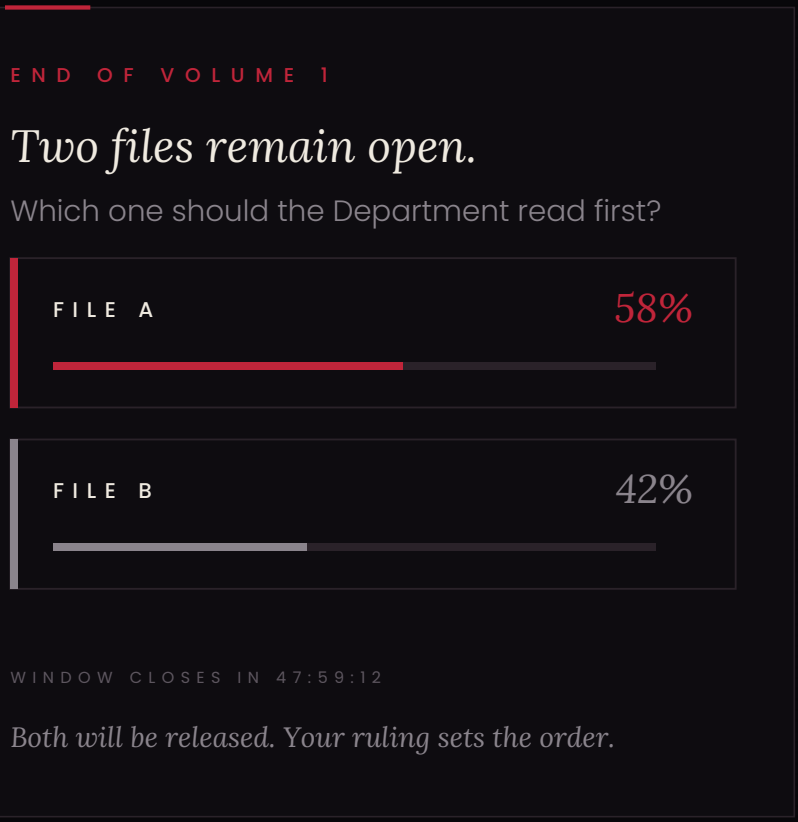

Two seasons of the mechanic are being kept under wraps.

Verdict Night, *step by step*.

Verdict Night is a bigger version of the same idea. About once every arc, roughly every five to seven files, the story stops and puts one larger decision in the hands of the room. It is never about the main plot, which is fixed. It is about a side thread, or about which of two stories you would like to read first.

In an order vote, two side files are ready and the room picks which opens first. Both will be released, so you are only deciding the order. Imagine two side stories waiting at the end of a volume, one following a companion character and one following a supporting character. The room votes, and then both arrive.

You have forty-eight hours, the tally is visible while it moves, and Verified Rulings from holders carry the weight, with Entries from everyone else counted in behind them.

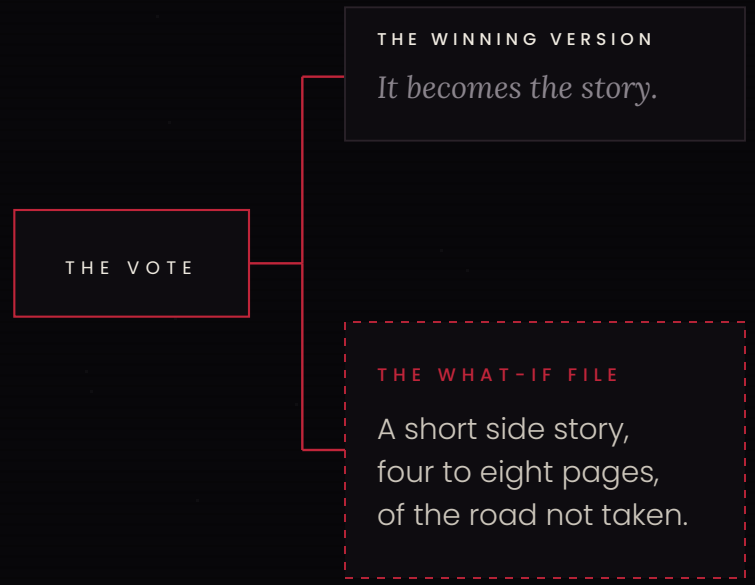

NOTE

An almost perfect tie opens both files together as a double issue with interleaved pages.

The outcome vote, *and the what-if file.*

In an outcome vote, one moment has two versions that are both compatible with the story that follows. Suppose a messenger is racing to reach Martin. In one version she arrives before the storm and he gets the warning in time. In the other she arrives after it and he is too late. The room votes, and the winning version becomes the story.

The other version becomes a short what-if file, four to eight pages. It respects the readers who voted for it, it costs pages and not new ideas because both versions were planned, and it gives collectors something extra.

THE ENDING WE USED

The winning version. It is the story.

THE ENDING IN THE EXTRAS

The other version. A short side story.

NOTE

The what-if file is labeled as a side story. It is not part of the main timeline. Printing it is optional.

The comic, *Open File*.

Open File is a working title. It is a serialized comic told in short interactive files, each about eight to ten pages, released roughly monthly and read in a web reader, with printed volumes to follow. Each file opens with a cold open that changes with the weather, pauses once for your reading, shows the result, and ends with one page of a recovered transmission from a voice the story has not named yet.

Issue 1, The Heist That Never Was, introduces Martin, the unit, the signal desk, and Cube, and ends in an elevator with Martin, his captain, and a signals officer descending toward a mission that was never what it was called. That is the first moment the story pauses.

Cube speaks only in halo readouts, and the Department speaks in stamped captions.

NOTE

Page counts are targets for the interactive reader. A rough draft of File 001 is at boxlord.org.

Fifty-three files, *ten* volumes.

The full story is planned as fifty-three files across ten volumes and five seasons, with ten Verdict Nights. The ending is written and fixed, and what stays open is everything on the way there. Volume 1, No Record, is five files long.

EACH DIAMOND IS A VERDICT NIGHT

SEASON ZERO
12 files

FILE 001

The Heist That Never Was

Martin, his unit, and Cube take on an off-books mission that is not what it was called.

SEASON ONE
11 files

FILE 002

The Vault

The mission goes down into a sealed vault, and what is waiting there changes everything.

SEASON TWO
10 files

FILE 003

What the City Requires

The city explains what happened, in public, and not everyone believes the story.

SEASON THREE
10 files

FILE 004

Zero Index

The city keeps erasing Martin, one record at a time, until almost nothing is left.

SEASON FOUR
10 files

FILE 005

The Misfits

Somewhere the city's signal does not reach, Martin meets people who see him differently.

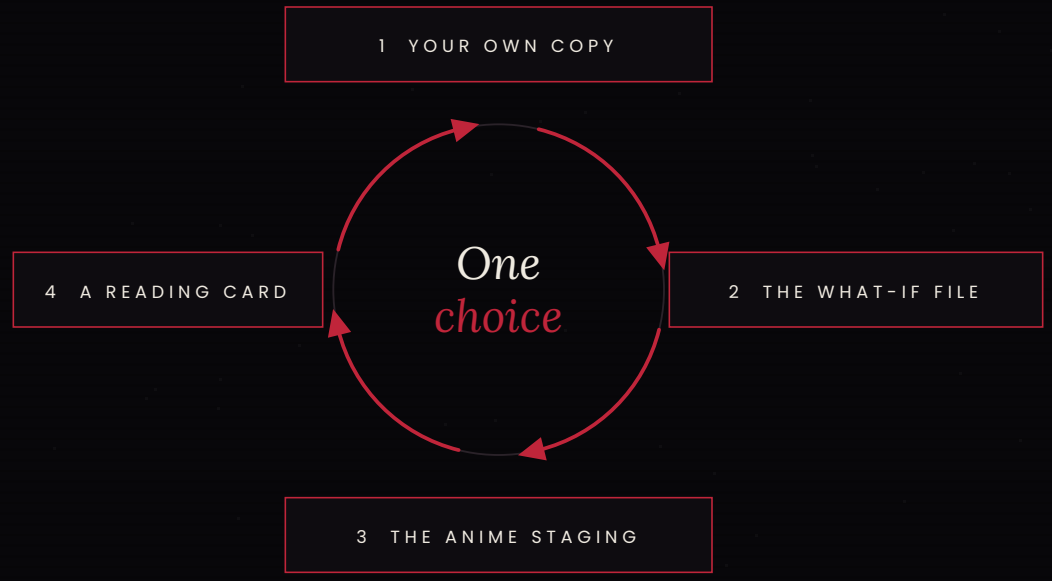

NOTE

Volume 1 is a working title. Season titles and the details of each file are being kept back until they ship.

One choice, *four* things.

Every time the room makes a choice, four things come out of it. One is your own copy of the story, which takes on the tone of your character reading and, over enough files, follows your own Perspective Profile down its own branch. Two is a what-if file, the version of a moment the room did not pick. Three is the anime, eventually staged in the same accumulated reading, not just the comic's. Four is a reading card you can share, with art from that exact moment and a mark of how rare your reading was.

Between releases, a daily weather post shows how the room is reading the last file, so people always have something to argue about.

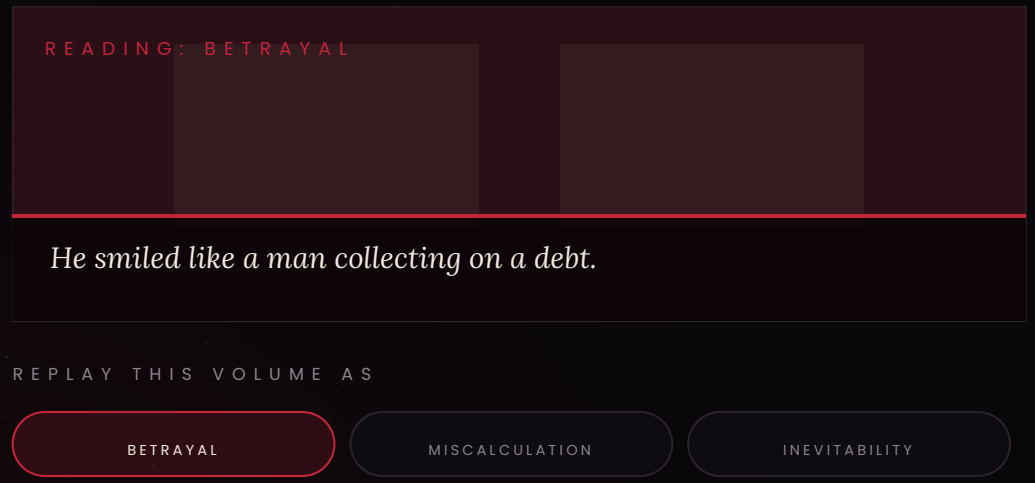

NOTE

Nothing in this loop needs a new plot.

Your copy, *and your reading card.*

You can replay any finished volume through a different reading, which is the best way to see what the other half of the crowd saw, and you can compare versions with other readers.

The reading card is a profile that updates after every file. It shows your readings in a row, where you lean between Harmony and Chaos, and how often you agree with the room, and it becomes a Volume Card you can keep or share.

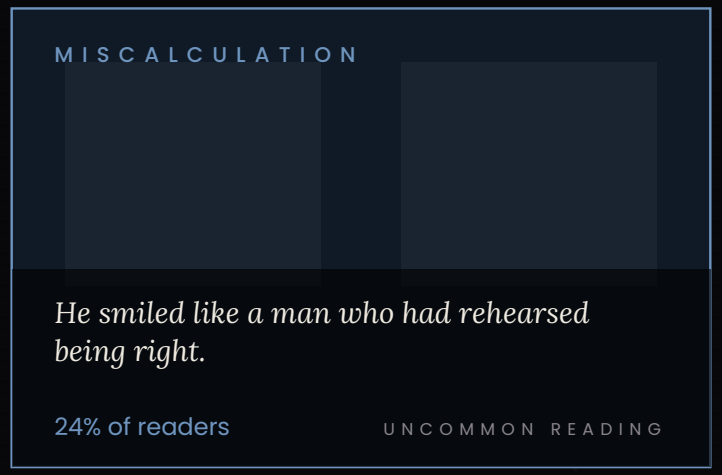

NOTE

The reading profile lives in the reader and does not need the game. The credit roll is planned and is not built yet.

A reading card you can *share*.

After you rule, the reader generates a card with art from that moment, tinted in your reading's color, a line from your caption, and the room's split. The smaller your share, the rarer the card, and the rarest get their own artwork.

People would post it because it looks good, because a reading says something about who you are, because minority readings become something to show off, because it starts arguments with a link back to the moment, and because readers who rule on every moment of a volume are planned to be credited in the printed book.

NOTE

The art shown is a placeholder. The cards will use finished art from each moment. Rare-card artwork and the credit roll are planned.

The anime, *ARRIVAL*.

COLD OPEN · A

COLD OPEN · B

The main episode

It never varies.

TAG SCENE · A

TAG SCENE · B

ARRIVAL adapts the comic as the readers ruled it. Each episode has a cold open and a tag scene finished in two versions before it airs. After the episode, viewers rule again for forty-eight hours, in what I call a Signal Week, and the vote selects a finished version. It never generates one, and the losing versions ship as extras.

Every frame is generated, using tools like Kling, Runway, and Sora. Direction, writing, voice casting, and score stay human, every tool is credited, and the pipeline is published before Episode 0. The subscriptions and compute for these tools are a real, ongoing cost, and covering that is part of what this project's funding is for.

Kling	VIDEO
Runway	VIDEO
Sora	VIDEO
ElevenLabs	VOICE
Suno	MUSIC

EVERY TOOL CREDITED

NOTE

Durations and counts are planning assumptions.

From pilot to season, *and the game*.

EPISODE 0

A full episode with the whole loop and both variants finished, about ten to twelve minutes.

SEASON 1

The first season of the comic, adapted as the readers ruled it, about eight episodes.

SEASON 2

The story widens, with about ten more episodes.

The anime lives first where AI-made work is welcome, which is X, YouTube, and TikTok, because many mainstream anime platforms and conventions are cautious about AI right now. I would rather build trust slowly than be caught arguing about something I hid, and the anime conversations begin after the pilot exists.

I promised Boxlord Omniverse Adventures first, and it stays first. RESONANCE, the game version of MADJACKET, is shelved for now, and nothing here depends on it. If it returns, your reading history could import into it.

From RESONANCE, the shelved game.

NOTE

Durations and episode counts are planning assumptions, not commitments. RESONANCE is the Unreal Engine game and is separate from this experience.

The chain, *the mint*, the reader.

1,999	~~$0.50~~	~~99~~	Sep 23
in the collection	*per mint, paid in ETH*	*free whitelist spots*	*the mint date*

LOL

FREE

THE MINT	YOUR WALLET	READER	THE LEDGER	WHAT COMES OUT
Minted on Robinhood Chain through OpenSea.	You hold the key.	A web app that shows pages and asks for readings.	A database of readings that sets the weather.	Your copy, what-if files, cards, and the anime.

Robinhood Chain is a public Ethereum layer 2 built on the Arbitrum stack. It went live on mainnet on July 1, 2026, pays gas in ETH, works with standard EVM tools, and is supported by OpenSea. Fees are small enough for a six-dollar mint, and the ecosystem is young enough for a project with real art to be noticed. It is also a young chain, and the comic and anime exist outside it.

Your wallet is your key. The reader checks your holdings, you sign a free message, and your rulings are recorded against your wallet. I never ask for a seed phrase. Tallies are meant to be published, and anchoring a fingerprint of the ledger on chain is a planned later step.

NOTE

Sources: Arbitrum, OpenSea, and Robinhood announcements, 2026. Reader, ledger publishing, and on-chain anchoring are described as plans where they are not yet built.

NFC editions, collectibles, *and BLXXNK*.

The physical layer starts small with a limited NFC edition of a single printed issue, then extends to a numbered printed volume with a chip in the back cover. The chips support encryption and a signed one-time code, so a tap proves a copy is genuine and shows its edition number. Tapping opens the digital layer: all three readings of every moment, animated key panels, and a bonus transmission page.

Collectibles come later on purpose, as identity and access and not investment. MADJACKET's come from the comic's world. BLXXNK, short for The Blank Spot, is the sister mascot with his own collection at boxlord.org, and he keeps appearing in the same universe. There is no speculative token in the plan, and nothing here promises revenue or profit to holders.

NOTE
NFC editions have not been produced yet. The unlocks are planned.

Every collection can grow its own *comic universe*.

MADJACKET is not the only collection I have made, and I want to name that on purpose rather than let it stay implicit. RSI is a 69-piece 1/1 PFP collection on Cardano. BLXXNK, The Blank Spot, is a 1/1 collection also on Cardano, and it already appears alongside MADJACKET's own world. MADJACKET itself is now minting on Robinhood Chain.

The intention is for that to keep being true structurally, not just as a coincidence of branding. RSI is the clearest candidate: sixty-nine 1/1s is a small enough cast that each one could plausibly become a named character, with its own comic run, its own protagonist, and its own Verdict Nights, rather than existing only as static art. The same logic extends to any collection I make, present or future, each becoming the seed of its own run, in its own place on the shared timeline.

Like the vision on the next few slides, this is a direction, not a dated deliverable. It is not funded, not scheduled, and nothing here promises a comic to any specific collection. But it is the actual shape I am building toward, one collection at a time, inside one shared canon.

NOTE

No specific collection is committed to a comic run here. This describes an intention, not a schedule.

Why one person *can do it*, and what it costs.

WHY IT IS DOABLE	It is what I already do. AI tools remove the cost that usually kills interactive comics, which is producing variants: alternate captions, recolors, cold-open variants, and short scenes. A comic and a web reader ship in weeks, while a game takes many months, so the comic and anime come first.
WHAT IT COSTS	Subscriptions and compute for the generative video, voice, and music tools that make the anime, things like Kling, Runway, and Sora, plus hosting, the database, and print runs. My time is the largest cost overall, and anime compute is the largest recurring tool cost.
WHAT I AM ASKING FOR	Enough runway to work on this full time, which means bills paid and subscriptions active. It is one person's living and tools, and not a big-team budget.
WHERE IT COMES FROM	The mint is a launch fund and not a salary. After that come digital files, memberships, printed volumes, NFC editions, posters and goods, commissions and contract annotation work, and grants and partners.
ALONGSIDE	Boxlord Omniverse Adventures continues in parallel, and the pipeline I build for one is reused by the other.

NOTE

Prices are set after File 001 shows what participation looks like. There are no revenue-share promises and no speculative token.

If this succeeds, *I want to say* this plainly.

Everything in this deck says clearly, and I mean it, that there are no revenue-share promises and no speculative token. That does not change, and nothing here should be read as an offer of one.

But I want to say one more thing honestly, without turning it into a program. If this succeeds well beyond plan, if there is a real surplus after the anime's compute, the comic's production, and my own runway are covered, I want to find real ways to thank the people who built it with me.

I am not designing or promising that here. I am naming a hope, not selling a mechanism, and holding a MADJACKET NFT is not a claim on anything I have just described.

Events, *tentative*.

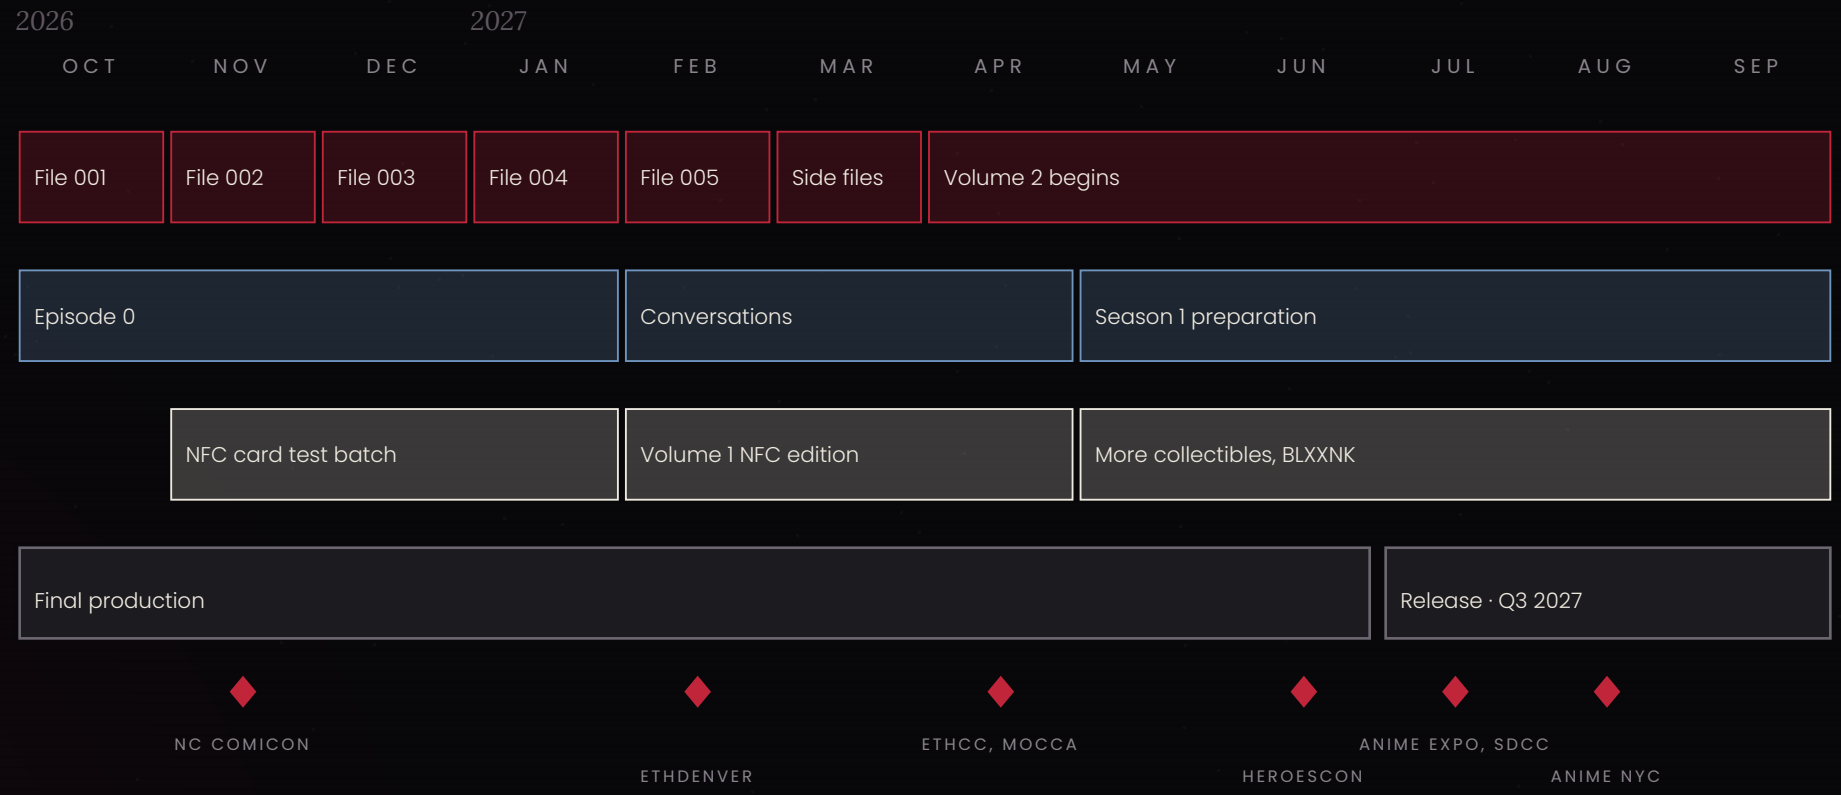

I read each show's own rules closely before I apply, lead with human-drawn key art, and find a way to participate on their terms, or around a restriction, when it is worth it.

EVENT	DATES	PLAN
NC Comicon (Bull City)	Nov 14 to 15, 2026	Durham, NC. Nothing booked yet, but realistic to apply to on short notice.
ETHDenver	Expected Feb 17 to 21, 2027	Builder tracks on NFTs and governance. Dates to be confirmed.
EthCC, Cannes	Apr 12 to 15, 2027	Side events. Decide on travel by January.
MoCCA Arts Festival	Apr 17 to 18, 2027	Consider a table with human-made work.
HeroesCon, Charlotte	Jun 11 to 13, 2027	A major comics show in Charlotte, North Carolina.
Anime Expo, San Diego Comic-Con	Jul 2 to 5, and Jul 22 to 25, 2027	Attend, and propose a panel when submissions open.
Anime NYC	Aug 26 to 29, 2027	Attend as a visitor.

NOTE

Nothing here is booked. Dates are from published listings as of late September 2026 and should be confirmed before any plans firm up.

The next *twelve months*.

NOTE

A planning sketch, not a promise. Event dates are from published listings.

The next *ninety days*.

Sep 23 to Oct 11

Run the mint, finish testing the reader end to end, and lock the decisions I have been putting off.

Oct 12 to Nov 11

Release File 001 in its final form in early-to-mid October, and see how many people rule and how many come back.

Nov 12 to Dec 11

File 002 opens in the weather the room chose, and the first membership cohort opens.

Dec 12 to Dec 26

Publish the pipeline page, and cut early anime test clips into short pieces for X.

The file remains open.

Read the rough draft of File 001 at boxlord.org. The mint is Wednesday, September 23. And tell me what you saw.

The Department has no ruling. You do.

NOTE

MADJACKET · Qoromancy Labs · boxlord.org. Boxlord Omniverse Adventures development runs alongside all of this.
